

Aesthetic solutions

Top mount with or without housing

For existing or to be renovated pools

Aesthetic, reliable, safe

An automatic slat cover hidden away neatly under a wooden bench at the end of your pool.

An AquaTop slat cover will keep your pool cleaner and safer and at the same time it will help you maintain the water temperature. A huge added value when used properly.

Not only the practical aspect is of importance. The aesthetic finishing is just as crucial. After all, a swimming pool remains a place for people to unwind and dream away.

Therefore AquaTop has created several solutions for a top mount system to blend into your area of fun and relaxation.

Automatic slat cover for an existing pool

Installation at construction or when renovating

Slat cover with a wooden housing

The cover is placed on the terrace at the end of the swimming pool and is covered by a wooden bench made out of 25 mm thick Ipe laths. The upholstery in tropical wood will contribute to an aesthetical and natural integration of the slat cover into the surrounding area. The cover is powered by an external scuba drive and operated with a key switch installed with a permanent view on the pool. The perfect solution to equip your pool with an automatic slat cover without affecting the structure or finishing of your pool.

AquaTop offers you an aesthetic finishing thanks to a wide range of designs.

The slat cover is installed on the edge of the swimming pool with a support on both sides. A limit switch comes as a standard feature with all Aquatop covers to guarantee the motor turning off once the cover is fully opened/closed.

In order to preserve the original colour of the wood, we advise you to treat it on an annual basis. Without this treatment the wood will age naturally and turn grey.

Child safety – NF P 90-308

The AquaTop cover meets the legal requirements for swimming pool safety and therefore complies with the norm NF P 90-308. In closed position it is important to secure the cover using the safety buckles on both sides of the cover (one side for installations with a bench). When used correctly, one can meet the weight resistance goal of 100 kgs .

The wireless remote control, PVC solar slats, transparent slats and the use of slats on infinity pools do not meet the requirements for this norm. Your installer can guide you through the alternative solutions to stay within the legal norms.

Important :

The AquaTop cover is meant to prevent children under the age of 5 from entering the pool unguided. **Period of use** : all seasons except during times of hail. The pool must hold its water level during winter. **Pool size** : width from 3 to 12m, length from 6 to 35m, Roman staircase from 2m and up. **Cover rolling time** : for an 8x4m pool: 3 minutes, **Opening/closing of safety buckles** : 30 seconds for the manual system, instantaneously with the automatic system TopLock. **Packaging of an 8x4m cover** : crate of 4.15m long, 63cms wide and 68cms high. More or less 300kgs. **Use** : 1 person can control the cover without any physical effort. The cover may in no case be used to replace common sense nor sense of responsibility. It may not be used as an alternative for supervision by parents or other adults who are still at the basis of their children's safety . The maximum space between the cover and the edge of the pool may not exceed 7 cms. The covers are installed by AquaTop professionals who can guide you in your search for the best possible solution to suit your needs..
